

Package: mlr3oml (via r-universe)

August 29, 2024

Title Connector Between 'mlr3' and 'OpenML'

Version 0.10.0

Description Provides an interface to 'OpenML.org' to list and download machine learning data, tasks and experiments. The 'OpenML' objects can be automatically converted to 'mlr3' objects. For a more sophisticated interface with more upload options, see the 'OpenML' package.

mlr3oml-package	<i>mlr3oml: Connector Between 'mlr3' and 'OpenML'</i>
-----------------	---

Description

Provides an interface to 'OpenML.org' to list and download machine learning data, tasks and experiments. The 'OpenML' objects can be automatically converted to 'mlr3' objects. For a more sophisticated interface with more upload options, see the 'OpenML' package.

Documentation

Start by reading the Large-Scale Benchmarking [chapter](#) from the mlr3book.

mlr3 Integration

This package adds the `mlr3::Task "oml"` and the `mlr3::Resampling "oml"` to `mlr3::mlr_tasks` and `mlr3::mlr_resamplings`, respectively. For the former you may pass either a `data_id` or a `task_id`, the latter requires a `task_id`. Furthermore it allows to convert the OpenML objects to mlr3 objects using the usual S3 generics such as `mlr3::as_task`, `mlr3::as_learner`, `mlr3::as_resampling`, `mlr3::as_resample_result`, `mlr3::as_benchmark_result` or `mlr3::as_data_backend`. This allows for a frictionless integration of OpenML and mlr3.

Options

- `mlr3oml.cache`: Enables or disables caching globally. If set to `FALSE`, caching is disabled. If set to `TRUE`, cache directory as reported by `R_user_dir()` is used. Alternatively, you can specify a path on the local file system here. Default is `FALSE`.
- `mlr3oml.api_key`: API key to use. All operations supported by this package work without an API key, but you might get rate limited without an API key. If not set, defaults to the value of the environment variable `OPENMLAPIKEY`.
- `mlr3oml.arff_parser`: ARFF parser to use, defaults to the internal one relies on `data.table::fread()`. Can also be set to "RWeka" for the parser in **RWeka**.
- `mlr3oml.parquet`: Enables or disables parquet as the default file format. If set to `TRUE`, the parquet version of datasets will be used by default. If set to `FALSE`, the arff version of datasets will be used by default. Note that the OpenML sever is still transitioning from arff to parquet and some features will work better with arff. Default is `FALSE`.
- `mlr3oml.retries`: An integer defining number of retries when downloading data from OpenML. If it is `NULL`, the number of retries is set to 3.

Relevant for developers

- `mlr3oml.test_server`: The default value for whether to use the OpenML test server. Default is `FALSE`.
- `mlr3oml.test_api_key`: API key to use for the test server. If not set, defaults to the value of the environment variable `TESTOPENMLAPIKEY`.

Logging

The **lgr** package is used for logging. To change the threshold, use `lgr::get_logger("mlr3oml")$set_threshold()`.

as_learner.OMLFlow	<i>Convert an OpenML Flow to a mlr3 Learner</i>
--------------------	---

Description

By default this function creates a Pseudo-Learner (that cannot be used for training or prediction) for the given task type. This enables the conversion of OpenML Runs to [mlr3::ResampleResults](#). This is well defined because each subcomponent (i.e. id) can only appear once in a Flow according to the OpenML docs.

Usage

```
## S3 method for class 'OMLFlow'
as_learner(x, task_type = NULL, ...)
```

Arguments

x	(OMLFlow) The OMLFlow that is converted to a mlr3::Learner.
task_type	(character(1)) The task type to construct a pseudo-learner. For more information see OMLFlow .
...	Additional arguments.

list_oml	<i>List Data from OpenML</i>
----------	------------------------------

Description

This function allows to query data sets, tasks, flows, setups, runs, and evaluation measures from <https://www.openml.org/search?type=data&sort=runs&status=active> using some simple filter criteria.

To find datasets for a specific task type, use [list_oml_tasks\(\)](#) which supports filtering according to the task type. Another heuristic to search for possible regression tasks is to search for data sets with 0 number of classes, i.e. by specifying `number_classes = 0`.

Usage

```
list_oml_data(
  data_id = NULL,
  data_name = NULL,
  number_instances = NULL,
  number_features = NULL,
  number_classes = NULL,
  number_missing_values = NULL,
  tag = NULL,
```

```
    limit = limit_default(),
    test_server = test_server_default(),
    ...
)

list_oml_evaluations(
    run_id = NULL,
    task_id = NULL,
    measures = NULL,
    tag = NULL,
    limit = limit_default(),
    test_server = test_server_default(),
    ...
)

list_oml_flows(
    uploader = NULL,
    tag = NULL,
    limit = limit_default(),
    test_server = test_server_default(),
    ...
)

list_oml_measures(test_server = test_server_default())

list_oml_runs(
    run_id = NULL,
    task_id = NULL,
    tag = NULL,
    flow_id = NULL,
    limit = limit_default(),
    test_server = test_server_default(),
    ...
)

list_oml_setups(
    flow_id = NULL,
    setup_id = NULL,
    tag = NULL,
    limit = limit_default(),
    test_server = test_server_default(),
    ...
)

list_oml_tasks(
    task_id = NULL,
    data_id = NULL,
    number_instances = NULL,
```

```

    number_features = NULL,
    number_classes = NULL,
    number_missing_values = NULL,
    tag = NULL,
    limit = limit_default(),
    test_server = test_server_default(),
    type = NULL,
    ...
)

```

Arguments

data_id	(integer()) Vector of data ids to restrict to.
data_name	(character(1)) Filter for name of data set.
number_instances	(integer()) Filter for number of instances.
number_features	(integer()) Filter for number of features.
number_classes	(integer()) Filter for number of labels of the target (only classification tasks).
number_missing_values	(integer()) Filter for number of missing values.
tag	(character()) Filter for tags. You can provide multiple tags as character vector.
limit	(integer()) Limit the results to <code>limit</code> records. Default is the value of option <code>"mlr3oml.limit"</code> , defaulting to 5000.
test_server	(character(1)) Whether to use the OpenML test server or public server. Defaults to value of option <code>"mlr3oml.test_server"</code> , or FALSE if not set.
...	(any) Additional (unsupported) filters, as named arguments.
run_id	(integer()) Vector of run ids to restrict to.
task_id	(integer()) Vector of task ids to restrict to.
measures	(character()) Vector of evaluation measures to restrict to.
uploader	(integer(1)) Filter for uploader.

flow_id	(integer(1)) Filter for flow id.
setup_id	(integer()) Vector of setup ids to restrict to.
type	(character(1)) The task type, supported values are: "clasisf", "regr", "surv" and "clust".

Details

Filter values are usually provided as single atomic values (typically integer or character). Provide a numeric vector of length 2 (c(l, u)) to find matches in the range $[l, u]$.

Note that only a subset of filters is exposed here. For a more feature-complete package, see **OpenML**. Alternatively, you can pass additional filters via ... using the names of the official API, c.f. the *REST* tab of <https://www.openml.org/apis>.

Value

(data.table()) of results, or a null data.table if no data set matches the filter criteria.

Description

Creates an `OMLCollection` instance.

Usage

```
ocl(id, test_server = test_server_default())
```

Arguments

id	(integer(1)) OpenML id for the object.
test_server	(character(1)) Whether to use the OpenML test server or public server. Defaults to value of option "mlr3oml.test_server", or FALSE if not set.

Value

(OMLCollection)

odt *Syntactic Sugar for Data Construction*

Description

Creates an [OMLData](#) instance.

Usage

```
odt(id, parquet = parquet_default(), test_server = test_server_default())
```

Arguments

id	(integer(1)) OpenML id for the object.
parquet	(logical(1)) Whether to use parquet instead of arff. If parquet is not available, it will fall back to arff. Defaults to value of option "mlr3oml.parquet" or FALSE if not set.
test_server	(character(1)) Whether to use the OpenML test server or public server. Defaults to value of option "mlr3oml.test_server", or FALSE if not set.

Value

(OMLData)

oflw

Syntactic Sugar for Flow Construction

Description

Creates an `OMLFlow` instance.

Usage

```
oflw(id, test_server = test_server_default())
```

Arguments

<code>id</code>	(integer(1)) OpenML id for the object.
<code>test_server</code>	(character(1)) Whether to use the OpenML test server or public server. Defaults to value of option <code>"mlr3oml.test_server"</code> , or FALSE if not set.

Value

(`OMLFlow`)

oml_collection

OpenML Collection

Description

This is the class for collections (previously known as studies) served on <https://www.openml.org>. A collection can either be a **task collection** or **run collection**. This object can also be constructed using the sugar function `ocl()`.

Run Collection

A run collection contains runs, flows, datasets and tasks. The primary object are the runs (`main_entity_type` is "run"). The the flows, datasets and tasks are those used in the runs.

Task Collection A task collection (`main_entity_type = "task"`) contains tasks and datasets. The primary object are the tasks (`main_entity_type` is "task"). The datasets are those used in the tasks.

Note: All Benchmark Suites on OpenML are also collections.

Caching

Because collections on OpenML can be modified (ids can be added), it is not possible to cache this object.

mlr3 Intergration

- Obtain a list of `mlr3::Tasks` using `mlr3::as_tasks`.
- Obtain a list of `mlr3::Resamplings` using `mlr3::as_resamplings`.
- Obtain a list of `mlr3::Learners` using `mlr3::as_learners` (if `main_entity_type` is "run").
- Obtain a `mlr3::BenchmarkResult` using `mlr3::as_benchmark_result` (if `main_entity_type` is "run").

Super class

`mlr3oml::OMLObject` -> `OMLCollection`

Active bindings

`desc` (`list()`)
Collection description (meta information), downloaded and converted from the JSON API response.

`parquet` (`logical(1)`)
Whether to use parquet.

`main_entity_type` (`character(n)`)
The main entity type, either "run" or "task".

`flow_ids` (`integer(n)`)
An vector containing the flow ids of the collection.

`data_ids` (`integer(n)`)
An vector containing the data ids of the collection.

`run_ids` (`integer(n)`)
An vector containing the run ids of the collection.

`task_ids` (`integer(n)`)
An vector containing the task ids of the collection.

Methods

Public methods:

- `OMLCollection$new()`
- `OMLCollection$print()`
- `OMLCollection$download()`
- `OMLCollection$clone()`

Method `new()`: Creates a new instance of this R6 class.

Usage:

```
OMLCollection$new(id, test_server = test_server_default())
```

Arguments:

`id` (`integer(1)`)
OpenML id for the object.

`test_server` (character(1))
Whether to use the OpenML test server or public server. Defaults to value of option "mlr3oml.test_server", or FALSE if not set.

Method `print()`: Prints the object.

Usage:

`OMLCollection$print()`

Method `download()`: Downloads the whole object for offline usage.

Usage:

`OMLCollection$download()`

Method `clone()`: The objects of this class are cloneable with this method.

Usage:

`OMLCollection$clone(deep = FALSE)`

Arguments:

`deep` Whether to make a deep clone.

```

Description

This is the class for data sets served on [OpenML](#). This object can also be constructed using the sugar function `odt()`.

mlr3 Integration

- A `mlr3::Task` can be obtained by calling `mlr3::as_task()`. The target column must either be the default target (this is the default behaviour) or one of `$feature_names`. In case the target is specified to be one of `$feature_names`, the default target is added to the features of the task.
- A `mlr3::DataBackend` can be obtained by calling `mlr3::as_data_backend()`. Depending on the selected file-type, the returned backend is a `mlr3::DataBackendDataTable` (arff) or `mlr3db::DataBackendDuckDB` (parquet). Note that a converted backend can contain columns beyond the target and the features (id column or ignore columns).

Name conversion

Column names that don't comply with R's naming scheme are renamed (see `base::make.names()`). This means that the names can differ from those on OpenML.

File Format

The datasets stored on OpenML are either stored as (sparse) ARFF or parquet. When creating a new `OMLData` object, the constructor argument `parquet` allows to switch between arff and parquet. Note that not necessarily all data files are available as parquet. The option `mlr3oml.parquet` can be used to set a default. If `parquet` is `TRUE` but not available, "arff" will be used as a fallback.

ARFF Files

This package comes with an own reader for ARFF files, based on `data.table::fread()`. For sparse ARFF files and if the **RWeka** package is installed, the reader automatically falls back to the implementation in (`RWeka::read.arff()`).

Parquet Files

For the handling of parquet files, we rely on **duckdb** and **DBI**.

Super class

`mlr3oml::OMLObject` -> `OMLData`

Active bindings

`qualities` (`data.table()`)

Data set qualities (performance values), downloaded from the JSON API response and converted to a `data.table::data.table()` with columns "name" and "value".

`tags` (`character()`)

Returns all tags of the object.

`parquet` (`logical(1)`)

Whether to use parquet.

`data` (`data.table()`)

Returns the data (without the row identifier and ignore id columns).

`features (data.table())`

Information about data set features (including target), downloaded from the JSON API response and converted to a `data.table::data.table()` with columns:

- `"index"` (`integer()`): Column position.
- `"name"` (`character()`): Name of the feature.
- `"data_type"` (`factor()`): Type of the feature: `"nominal"` or `"numeric"`.
- `"nominal_value"` (`list()`): Levels of the feature, or `NULL` for numeric features.
- `"is_target"` (`logical()`): `TRUE` for target column, `FALSE` otherwise.
- `"is_ignore"` (`logical()`): `TRUE` if this feature should be ignored. Ignored features are removed automatically from the data set.
- `"is_row_identifier"` (`logical()`): `TRUE` if the column encodes a row identifier. Row identifiers are removed automatically from the data set.
- `"number_of_missing_values"` (`integer()`): Number of missing values in the column.

`target_names (character())`

Name of the default target, as extracted from the OpenML data set description.

`feature_names (character())`

Name of the features, as extracted from the OpenML data set description.

`nrow (integer())`

Number of observations, as extracted from the OpenML data set qualities.

`ncol (integer())`

Number of features (including targets), as extracted from the table of data set features. This excludes row identifiers and ignored columns.

`license (character())`

Returns all license of the dataset.

`parquet_path (character())`

Downloads the parquet file (or loads from cache) and returns the path of the parquet file. Note that this also normalizes the names of the parquet file.

Methods

Public methods:

- `OMLData$new()`
- `OMLData$print()`
- `OMLData$download()`
- `OMLData$quality()`
- `OMLData$clone()`

Method `new()`: Creates a new instance of this [R6](#) class.

Usage:

```
OMLData$new(
  id,
  parquet = parquet_default(),
  test_server = test_server_default()
)
```

Arguments:

id (integer(1))

OpenML id for the object.

parquet (logical(1))

Whether to use parquet instead of arff. If parquet is not available, it will fall back to arff.

Defaults to value of option "mlr3oml.parquet" or FALSE if not set.

test_server (character(1))

Whether to use the OpenML test server or public server. Defaults to value of option

"mlr3oml.test_server", or FALSE if not set.

Method print(): Prints the object. For a more detailed printer, convert to a [mlr3::Task](#) via `as_task()`.

Usage:

OMLData\$print()

Method download(): Downloads the whole object for offline usage.

Usage:

OMLData\$download()

Method quality(): Returns the value of a single OpenML data set quality.

Usage:

OMLData\$quality(name)

Arguments:

name (character(1))

Name of the quality to extract.

Method clone(): The objects of this class are cloneable with this method.

Usage:

OMLData\$clone(deep = FALSE)

Arguments:

deep Whether to make a deep clone.

oml_flow

*Interface to OpenML Flows***Description**

This is the class for flows served on [OpenML](#). Flows represent machine learning algorithms. This object can also be constructed using the sugar function `oflw()`.

mlr3 Integration

- Obtain a `mlr3::Learner` using `mlr3::as_learner()`.

Super class

`mlr3oml::OMLObject` -> `OMLFlow`

Active bindings

`parameter` (`data.table`)
The parameters of the flow.

`dependencies` (`character()`)
The dependencies of the flow.

`tags` (`character()`)
Returns all tags of the object.

Methods**Public methods:**

- `OMLFlow$new()`
- `OMLFlow$print()`
- `OMLFlow$download()`
- `OMLFlow$clone()`

Method `new()`: Creates a new instance of this [R6](#) class.

Usage:

```
OMLFlow$new(id, test_server = test_server_default())
```

Arguments:

`id` (`integer(1)`)

OpenML id for the object.

`test_server` (`character(1)`)

Whether to use the OpenML test server or public server. Defaults to value of option "mlr3oml.test_server", or FALSE if not set.

Method `print()`: Prints the object.

Usage:

```
OMLFlow$print()
```

Method `download()`: Downloads the whole object for offline usage.

Usage:

```
OMLFlow$download()
```

Method `clone()`: The objects of this class are cloneable with this method.

Usage:

```
OMLFlow$clone(deep = FALSE)
```

Arguments:

`deep` Whether to make a deep clone.

oml_object

Abstract Base Class for OpenML objects.

Description

All OML Objects inherit from this class. Don't use his class directly.

Active bindings

`desc` (`list()`)

Description of OpenML object.

`cache_dir` (`logical(1)` | `character(1)`)

Stores the location of the cache for objects retrieved from OpenML. If set to FALSE, caching is disabled. Objects from the test server are stored in the subdirectory 'test', those from the public server are stored in the subdirectory 'public'.

The package **qs** is required for caching.

`id` (`integer(1)`)

OpenML data id.

server (character(1))
The server for this object.

man (character(1))
The manual entry.

name (character(1))
The name of the object.

type (character())
The type of OpenML object (e.g. task, run, ...).

test_server (logical(1))
Whether the object is using the test server.

Methods

Public methods:

- [OMLObject\\$new\(\)](#)
- [OMLObject\\$help\(\)](#)
- [OMLObject\\$clone\(\)](#)

Method `new()`: Creates a new instance of this [R6](#) class.

Usage:

```
OMLObject$new(id, test_server = test_server_default(), type)
```

Arguments:

id (integer(1))

OpenML id for the object.

test_server (character(1))

Whether to use the OpenML test server or public server. Defaults to value of option "mlr3oml.test_server", or FALSE if not set.

type (character())

The type of OpenML object (e.g. run, task, ...).

Method `help()`: Opens the corresponding help page referenced by field `$man`.

Usage:

```
OMLObject$help()
```

Method `clone()`: The objects of this class are cloneable with this method.

Usage:

```
OMLObject$clone(deep = FALSE)
```

Arguments:

deep Whether to make a deep clone.

oml_run

*Interface to OpenML Runs***Description**

This is the class for OpenML **Runs**, which are conceptually similar to `mlr3::ResampleResults`. This object can also be constructed using the sugar function `oml_run()`.

OpenML Integration

- A `OMLTask` is returned by accessing the active field `$task`.
- A `OMLData` is returned by accessing the active field `$data` (short for `$task$data`)
- A `OMLFlow` is returned by accessing the active field `$flow`.
- The raw predictions are returned by accessing the active field `$prediction`.

mlr3 Integration

- A `mlr3::ResampleResult` is returned when calling `mlr3::as_resample_result()`.
- A `mlr3::Task` is returned when calling `mlr3::as_task()`.
- A `mlr3::DataBackend` is returned when calling `mlr3::as_data_backend()`.
- A instantiated `mlr3::Resampling` is returned when calling `mlr3::as_resampling()`.

Super class

```
mlr3oml::OMLObject -> OMLRun
```

Active bindings

```
flow_id (integer(1))
  The id of the flow.
flow (OMLFlow)
  The OpenML Flow.
tags (character())
  Returns all tags of the object.
parquet (logical(1))
  Whether to use parquet.
task_id (character(1))
  The id of the task solved by this run.
task (OMLTask)
  The task solved by this run.
data_id (integer(1))
  The id of the dataset.
data (OMLData)
  The data used in this run.
```

task_type (character())
The task type.

parameter_setting data.table()
The parameter setting for this run.

prediction (data.table())
The raw predictions of the run as returned by OpenML, not in standard mlr3 format. Formatted predictions are accessible after converting to a [mlr3::ResampleResult](#) via `as_resample_result()`.

evaluation (data.table())
The evaluations calculated by the OpenML server.

Methods

Public methods:

- [OMLRun\\$new\(\)](#)
- [OMLRun\\$print\(\)](#)
- [OMLRun\\$download\(\)](#)
- [OMLRun\\$clone\(\)](#)

Method `new()`: Creates a new instance of this [R6](#) class.

Usage:

```
OMLRun$new(
  id,
  parquet = parquet_default(),
  test_server = test_server_default()
)
```

Arguments:

`id` (integer(1))

OpenML id for the object.

`parquet` (logical(1))

Whether to use parquet instead of arff. If parquet is not available, it will fall back to arff. Defaults to value of option "mlr3oml.parquet" or FALSE if not set.

`test_server` (character(1))

Whether to use the OpenML test server or public server. Defaults to value of option "mlr3oml.test_server", or FALSE if not set.

Method `print()`: Prints the object.

Usage:

```
OMLRun$print()
```

Method `download()`: Downloads the whole object for offline usage.

Usage:

```
OMLRun$download()
```

Method `clone()`: The objects of this class are cloneable with this method.

Usage:

```
OMLRun$clone(deep = FALSE)
```

Arguments:

`deep` Whether to make a deep clone.

oml_task

Interface to OpenML Tasks

Description

This is the class for tasks served on **OpenML**. It consists of a dataset and other meta-information such as the target variable for supervised problems. This object can also be constructed using the sugar function `otsk()`.

mlr3 Integration

- Obtain a `mlr3::Task` by calling `as_task()`.
- Obtain a `mlr3::Resampling` by calling `as_resampling()`.

Super class

`mlr3oml::OMLObject` -> `OMLTask`

Active bindings

`estimation_procedure` (`list()`)
The estimation procedure, returns NULL if none is available.

`task_splits` (`data.table()`)
A `data.table` containing the splits as provided by OpenML.

`tags` (`character()`)
Returns all tags of the object.

`parquet` (`logical(1)`)
Whether to use parquet.

`name` (`character(1)`)
Name of the task, extracted from the task description.

`task_type` (character(1))
 The OpenML task type.

`data_id` (integer())
 Data id, extracted from the task description.

`data` ([OMLData](#))
 Access to the underlying OpenML data set via a [OMLData](#) object.

`nrow` (integer())
 Number of rows, extracted from the [OMLData](#) object.

`ncol` (integer())
 Number of columns, as extracted from the [OMLData](#) object.

`target_names` (character())
 Name of the targets, as extracted from the OpenML task description.

`feature_names` (character())
 Name of the features (without targets of this [OMLTask](#)).

`data_name` (character())
 Name of the dataset (inferred from the task name).

Methods

Public methods:

- [OMLTask\\$new\(\)](#)
- [OMLTask\\$print\(\)](#)
- [OMLTask\\$download\(\)](#)
- [OMLTask\\$clone\(\)](#)

Method `new()`: Creates a new instance of this [R6](#) class.

Usage:

```
OMLTask$new(
  id,
  parquet = parquet_default(),
  test_server = test_server_default()
)
```

Arguments:

`id` (integer(1))
 OpenML id for the object.

`parquet` (logical(1))
 Whether to use parquet instead of arff. If parquet is not available, it will fall back to arff. Defaults to value of option `"mlr3oml.parquet"` or FALSE if not set.

`test_server` (character(1))
 Whether to use the OpenML test server or public server. Defaults to value of option `"mlr3oml.test_server"`, or FALSE if not set.

Method `print()`: Prints the object. For a more detailed printer, convert to a [mlr3::Task](#) via `$task`.

Usage:

```
OMLTask$print()
```

Method `download()`: Downloads the whole object for offline usage.

Usage:

```
OMLTask$download()
```

Method `clone()`: The objects of this class are cloneable with this method.

Usage:

```
OMLTask$clone(deep = FALSE)
```

Arguments:

`deep` Whether to make a deep clone.

orn

Syntactic Sugar for Run Construction

Description

Creates an `OMLRun` instance.

Usage

```
orn(id, parquet = parquet_default(), test_server = test_server_default())
```

Arguments

<code>id</code>	(integer(1)) OpenML id for the object.
<code>parquet</code>	(logical(1)) Whether to use parquet instead of arff. If parquet is not available, it will fall back to arff. Defaults to value of option "mlr3oml.parquet" or FALSE if not set.
<code>test_server</code>	(character(1)) Whether to use the OpenML test server or public server. Defaults to value of option "mlr3oml.test_server", or FALSE if not set.

Value

(OMLRun)

otsk

*Syntactic Sugar for Task Construction***Description**Creates an [OMLTask](#) instance.**Usage**

```
otsk(id, parquet = parquet_default(), test_server = test_server_default())
```

Arguments

id	(integer(1)) OpenML id for the object.
parquet	(logical(1)) Whether to use parquet instead of arff. If parquet is not available, it will fall back to arff. Defaults to value of option "mlr3oml.parquet" or FALSE if not set.
test_server	(character(1)) Whether to use the OpenML test server or public server. Defaults to value of option "mlr3oml.test_server", or FALSE if not set.

Value

(OMLTask)

publish_collection

*Publish a Collection to OpenML***Description**Publish a collection to OpenML This can also be achieved through the [website](#).**Usage**

```
publish_collection(
  ids,
  name,
  desc,
  main_entity_type = "task",
  alias = NULL,
  api_key = NULL,
  test_server = test_server_default()
)
```

Arguments

ids	(integer()) The IDs to include in the collection. Depending on the main entity tupe, these can be task or run IDs.
name	(character(1)) The name for the collection.
desc	(character(1)) The description of the collection.
main_entity_type	(character(1)) The main entity type of the collection. Can be either "task" or "run".
alias	(character(1)) The alias for the collection.
api_key	(character(1)) The API key to perform the action, if left NULL it first tries the "mlr3oml.api_key" R option and then the environment variable OPENMLAPIKEY. In case test_server is TRUE (only relevant for developers) the test server API key is used, i.e. first the option "mlr3oml.test_api_key" and then the environment variable TESTOPENMLAPIKEY.
test_server	(character(1)) Whether to use the OpenML test server or public server. Defaults to value of option "mlr3oml.test_server", or FALSE if not set.

publish_data

Upload data to OpenML

Description

Upload a dataset to OpenML. This can also be achieved through the [website](#).

Usage

```
publish_data(
  data,
  name,
  desc,
  license = NULL,
  default_target = NULL,
  citation = NULL,
  row_identifier = NULL,
  ignore_attribute = NULL,
  original_data_url = NULL,
  paper_url = NULL,
  test_server = test_server_default(),
  api_key = NULL
)
```

Arguments

data	(<code>data.frame()</code>) The data to upload.
name	(<code>character(1)</code>) The name of the dataset.
desc	(<code>character(1)</code>) The description of the dataset.
license	(<code>character(1)</code>) The license of the dataset
default_target	(<code>character(1)</code>) The default target variable.
citation	(<code>character(1)</code>) How to cite the dataset.
row_identifier	(<code>character(1)</code>) Whether any of the columns is a row identifier.
ignore_attribute	(<code>character(1)</code>) Which columns to ignore during modeling.
original_data_url	(<code>character(1)</code>) The URL of the original data set.
paper_url	(<code>character(1)</code>) The URL of the paper describing the data set.
test_server	(<code>character(1)</code>) Whether to use the OpenML test server or public server. Defaults to value of option "mlr3oml.test_server", or FALSE if not set.
api_key	(<code>character(1)</code>) The API key to perform the action, if left NULL it first tries the "mlr3oml.api_key" R option and then the environment variable OPENMLAPIKEY. In case test_server is TRUE (only relevant for developers) the test server API key is used, i.e. first the option "mlr3oml.test_api_key" and then the environment variable TESTOPENMLAPIKEY.

publish_task

Publish a task on OpenML

Description

Publish a task on OpenML. This can also be achieved through the [website](#).

Usage

```
publish_task(
  id,
  type,
  estimation_procedure,
  target,
  api_key = NULL,
  test_server = test_server_default()
)
```

Arguments

id	(integer(1)) The dataset id.
type	(character(1) or integer(1)) Can either be "classif" or "regr" or an integer indicating the task type.
estimation_procedure	(integer(1)) The id of the estimation procedure.
target	(character(1)) The target variable (if applicable).
api_key	(character(1)) The API key to perform the action, if left NULL it first tries the "mlr3oml.api_key" R option and then the environment variable OPENMLAPIKEY. In case test_server is TRUE (only relevant for developers) the test server API key is used, i.e. first the option "mlr3oml.test_api_key" and then the environment variable TESTOPENMLAPIKEY.
test_server	(character(1)) Whether to use the OpenML test server or public server. Defaults to value of option "mlr3oml.test_server", or FALSE if not set.

read_arff

Read ARFF files

Description

Parses a file located at path and returns a `data.table()`.

Limitations:

- Only works for dense files, no support for sparse data. Use **RWeka** instead.
- Dates (even if there is no time component) are read in as `POSIXct`.
- The date-format from the ARFF specification is currently ignored. Instead, we rely on the auto-detection of `data.table`'s `fread()`.

Usage

```
read_arff(path)
```

Arguments

path (character(1))
Path or URI of the ARFF file, passed to `file()`.

Value

(`data.table()`).

write_arff	<i>Write ARFF files</i>
------------	-------------------------

Description

Writes a `data.frame()` to an ARFF file.

Limitations:

- Logicals are written as categorical features.
- `POSIXct` columns are converted to UTC.

Usage

```
write_arff(data, path, relation = deparse(substitute(data)))
```

Arguments

data (data.frame())
Data to write.

path (character(1))
Path or URI of the ARFF file, passed to `file()`.

relation (character(1))
Relation (name) of the data set.
